1 Exercises

Exercise 1. Consider the following program:

```
import stdio
import sys

stdio.write('Hi ')
stdio.write(sys.argv[4])
stdio.write(', ')
stdio.write(sys.argv[2])
stdio.write(', and ')
stdio.write(', and ')
stdio.write(', sargv[1])
stdio.write(', and ')
```

What does the program write to standard output when it is run as follows?

```
>_ ~/workspace/ipp/programs

$ python3 mystery.py Alice 'Bob Carol' Dan Eve
```

Exercise 2. Write a program called phone.py that accepts an area code (str), exchange code (str), and subscriber number (str) as command-line arguments, and writes to standard output the corresponding phone number in +1 (xxx) xxx-xxxx format.

```
>_ ~/workspace/ipp/programs

$ python3 phone.py 728 560 3845

+1 (728) 560-3845

$ _
```

2 Solutions

Solution 1.

```
Hi Eve, Bob Carol, and Alice!
```

Solution 2.

```
import stdio
import sys

stdio.write('+1 (')
stdio.write(sys.argv[1])
stdio.write(') ')
stdio.write(sys.argv[2])
stdio.write('-')
stdio.write('-')
stdio.write('sys.argv[3])
```
